

KaWe neurological hammer Beech, plastic handle

Characteristics and description

- Producer KaWe
 - Producing country Germany
- First of all, the neurological hammer should be convenient for the neurologist to use. Lightness and ergonomic shape, as well as complete set with a needle and a brush make the "Buk" model from KaWe simply irreplaceable for regular use in medical practice. A stylish plastic handle, high-quality materials, and reliable construction

are the distinguishing features of this device.

Purpose of the neurological hammer "Buk" from KaWe

The neurological hammer "Buk" from the German manufacturer KaWe allows you to get an objective picture of the possible presence of nervous diseases in the patient. Thanks to this device:

percussion;

examination of tendon reflexes;

diagnosis of skin sensitivity;

checking the function of the cranial and oculomotor nerves.

The model is distinguished by the presence of a handle made of plastic and a head made of rubber. The weight, size and shape of the hammer allow you to use it both vertically and horizontally.
